I am final-year Ph.D. candidate in Actuarial Science, under the supervision of [Prof. Vladimir Kaishev](#) and [Dr. Dimitrina Dimitrova](#). My research is on stochastic models using spline functions and copulas, and includes work on generalised additive models, gradient boosting, non-parametric density estimation, Cox regression and accelerated failure time models, as well as on the modelling of real/perceived income and standard of living, and their implications in marketing.
